

Upstreet6

Speedy, dynamic, and aesthetically pleasing

Glide over the asphalt at high speed, experience acceleration, feel the wind in your face, enjoy the bike's dynamism, ride past the rush-hour traffic in style while taking in the admiring glances with no worries about finding a parking space and no stress. The Upstreet6 provides a new definition of everyday mobility: efficient, active, and sustainable.

- The bike's appearance with its clear lines is characterised by dynamism and a direct and sporty riding experience.
- This high-speed e-bike is only available with pedal assist of up to 45 km/h.
- The exceptionally quiet hub motor with a top performance of 825W and a torque of 37Nm offers powerful acceleration and a consistently high speed.
- The battery capacity of 810Wh guarantees an extra-long range.
- The perfect combination of full integration and the simplest battery handling: the battery is placed directly into the down tube without a cover.
- In long-life mode, the battery only charges to 80 % and when the battery reaches a charge of 20 %, the rider is informed that the battery needs charging. If the full battery capacity is not always used, battery life can be maximised with this selectable mode.
- The large FIT D1 display with its intelligent additional functions is perfectly integrated into the stem with its adjustable angle.
- A suspension fork can be selected for enhanced comfort.
