

# Upstreet6

## Speedy, dynamic and aesthetically pleasing

Glide over the asphalt at high speed, experience acceleration, feel the wind in your face, enjoy the bike's dynamism, ride past the rush-hour traffic in style while taking in the admiring glances with no worries about finding a parking space and no stress. The Upstreet6 provides a new definition of everyday mobility: efficient, active and sustainable. Designed for commuters, this high-speed e-bike (S-pedelec) is only available with pedal assist of up to 45 km/h. The hub motor develops its potential powerfully and almost silently, and guarantees a smooth and dynamic ride. The Upstreet6 is also dynamic in its appearance with its clean lines and detailed solutions such as the FIT D1 display that is perfectly integrated into the stem. The fully integrated 810 Wh FLYER FIB battery is designed for long ranges and consistently provides power on longer commutes and detours. The journey to work has never been this much fun.

### TDCM HCA5 motor

The new, extremely quiet yet dynamic hub motor with a peak performance of 825 watts and 37 Nm torque guarantees rapid acceleration and a consistently high speed.

### Integrated FIT D1 display

Elegantly integrated into the stem, the large FIT D1 display presents all the riding information in a clearly laid out manner and offers intelligent additional functions such as navigation and fitness functions.

### FLYER FIB-810 battery

The new FLYER Fully Integrated Battery (FIB) has a capacity of an incredible 810 Wh, which guarantees an extremely long range. When braking or using the appropriate riding mode, the motor generates energy that is fed back into the battery and increases the range (recuperation).

#### FIB battery integration

This is as clever as it is simple: the battery is placed directly into the L-shaped down tube without a cover, providing the perfect combination of full integration and the simplest battery handling. It is easy to charge the battery on the e-bike and away from the bike.

#### Long-life mode

In long-life mode, the battery only charges to 80 %, and when the battery reaches a charge of 20 %, the rider is informed that the battery needs charging. If the full battery capacity is not always used, battery life can be maximised with this selectable mode.

#### Suspension fork (optional)

A suspension fork can be selected for enhanced comfort.
